EXPERIENCE

Product Manager II - Microsoft Update

Aug 2025 – Present

Microsoft | Redmond, WA

- Owned the roadmap and launched a unified update publishing toolset—including a guided UI, CLI, and ADO pipeline extension—that enabled first-party product teams to publish, distribute, and monitor updates at Windows install-base scale without the need for custom API integrations. Adopted by 2 product teams for retail rollout and flighting, with 5 more expected by year-end.
- Redesigned onboarding for product teams adopting the modern Microsoft Update publishing service, standardizing requirements gathering and validation to reduce onboarding time from 28 to 9.5 days. Onboarded 7 product teams to date across migrations from the legacy service and net-new adoptions.
- Leading the migration of OneDrive to Microsoft Update through a fundamental installer architecture mismatch — negotiating and shipping a cross-team fix to unblock onboarding, and designing custom staged-targeting rules to support enterprise-scale rollout.

Product Manager II - Windows Update

Mar 2024 – Aug 2025

Microsoft | Redmond, WA

- Shipped a new Windows Update client capability to ~300M devices, enabling developers to leverage the built-in Windows Update orchestrator for product servicing through a WinRT API surface.
- Drove end-to-end feature validation (A/B testing) with internal experimental platforms to define success metrics and evaluate experimentation scorecards with statistical rigor.

Product Manager I - Windows Autopatch (prev. Update for Business)

Aug 2022 – Mar 2024

Microsoft | Redmond, WA

- Launched a new Windows 11 OS update deployment feature for IT administrators, driving the process from specification to release. Feature was used by approximately 1.5K unique tenants reaching approximately 1M devices within the first 28 days of launch, accounting for 11% of new deployments created in the platform.
- Drove the Windows Update for Business API roadmap in Microsoft Graph from beta to v1.0, closing capability gaps and securing cross-functional approvals.

Founding Product Manager

Oct 2025 – August 2026

Edviser.ai | Seattle, WA

- Led product and UX definition for Edviser Studio, a no-code tool enabling higher education institutions to scale personalized student advising through a safety-governed, institution-controlled AI platform.
- Designed a Preview/Live governance model enabling institutions to validate and simulate AI advising experiences before any student exposure, embedding responsible AI principles into the core product.

President

Mar 2020 – May 2022

RemixCS - Rice University | Houston, TX

- Founded a mentorship program matching Houston-area 8-12th grade students with Rice CS students, growing the program from a dozen to 100+ participants in 2 years by partnering with local teachers and non-profits.

EDUCATION

BA in Computer Science, Minor in Entrepreneurship

Aug 2018 - May 2022

Rice University

- GPA: 3.8/4.0
- Coursework: Data Structures & Algorithms, Compiler Construction, Advanced Object-Oriented Programming, Computer Systems, Computer Networks, Entrepreneurial Strategy, Business Modeling for Entrepreneurs, Social Entrepreneurship, Ethics of Computer Science

SKILLS

Product: Feature Roadmap and Prioritization | API Design | A/B Testing | Wireframing/Prototyping (Figma) | Human-Computer Interaction design

Technical: Python | Java | C | JavaScript/TypeScript | React | SQL | HTML/CSS | R
